

## Project Profile

Project Title

Access Lifting and Maintenance (ALM) Studies

Description

GHA Livigunn provide experienced trained ALM team leaders, to ensure that any ALM review is carried out thoroughly and covers all of these elements thoroughly. Our ALM process is based on the use of key words, not dissimilar to a HAZOP study, using general arrangement drawings to assess and identify any shortfalls or deficiencies in the design. We will structure the review in that we will prepare the agenda for the meetings, prepare the drawing packs on which the review will be undertaken, including the determination of the review areas, production of minutes, distribution of the actions, and final reporting detailing how the actions are to be closed out.

We have experience of ALM chairmanship in

- Clean water processing
- Wastewater treatment

where this technique is used extensively as a key design tool.
