

Project Profile

Project Title	Demmings Moss SR
Client	J Murphy and Sons/United Utilities
Project Value	£2.5m
Contract Conditions	GC Works
Duration	9 months
GHA Livigunn Services	Civil and Structural Engineering Design Mechanical and Electrical Design Architecture

Description

Design and Construction of 8.4ML twin compartment service reservoir with integral valve house and chemical dosing building. Sited at 420 metres above sea level on Shap summit the reservoir has significantly improved water supply to Shap area. The site was overlain by a peat moss which was stockpiled and careful temporary works were required to ensure that it could be reinstated on completion. Despite the remote location and extreme weather conditions the project was completed on programme.
