

## Project Profile

**Project Title**

GRC Façade engineering

**Description**

Typically accounting for around 15% of a building's construction cost – the same as the structure – a façade is an important financial consideration for any project. BSCP provides impartial advice to owners and managers to help them to manage the technical, commercial and programme risks associated with façade and roof elements.

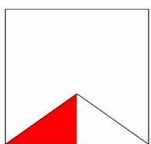

BSCP works with building owners, architects, and main contractors. The firm's expertise in GRC also enables its facade engineering division to work closely with cladding manufacturers to develop innovative products for façades.

BSCP's consultancy and project management is fundamental in creating the architectural expression of the buildings façade.

BSCP has over 30 years experience in the GRC industry.

BSCP's detailed knowledge of GRC and its manufacturing processes enables architects to realise their vision of what the façade should be.

BSCP's 3D design capabilities help to ensure that the facade can be optimised for performance and materials.
